

# ADDITIONAL NOTES ON THE « MENISPERMACEAE »

## I

By HAROLD N. MOLDENKE

(U. S. A.)

---

### RESUMEN

**Notas adicionales sobre Menispermaceae. I.** — En este trabajo el autor cita ejemplares de *Menispermaceae*, que no había estudiado anteriormente, haciendo algunas consideraciones referentes a ellos. Agrega la distribución geográfica de las especies en distintos países sud y centroamericanos y una lista de la sinonimia y describe una nueva especie: *Anomospermum bolivianum* Krukoff et Moldenke.

On November 22, 1938, Mr. B. A. Krukoff and I published in *Brittonia*, volume 3, pages 1 to 74, a paper entitled *Studies of American « Menispermaceae », with special reference to species used in preparation of arrow-poisons*. On page 338 of the same volume (October 5, 1939) we published a supplementary note entitled *A new name for Cocculus toxiciferus Wedd.*

The present paper will bring together some additional notes on this group of plants notes which either were not available at the time the afore-mentioned articles went to press or else could not be included because of the editorial policies of the journal involved. There is, for instance, in the original paper in several instances a discrepancy between the number of specimens said to have been examined of several of the species and the number of such specimens actually cited. Furthermore, several specimens were cited from the Britton herbarium when they actually are in the Columbia or Meisner herbaria instead. A rather large number of additional specimens have

also been received by me since these articles went to press and these are hereinafter cited, and a newly discovered species is described here for the first time.

The six abbreviations herein employed to represent the names of the herbaria in which the additional specimens are to be found are as follows: C = Columbia University herbarium, New York Botanical Garden; K = Royal Botanic Gardens, Kew; M = Meisner herbarium, New York Botanical Garden; Mu = Botanisches Museum, Munich; N = Britton herbarium, New York Botanical Garden, New York City; and P = Muséum National d'Histoire Naturelle, Paris.

#### **Abuta barbata** Miers

Additional citations: SURINAM: Boschwezen 6506 (N-fragment). FRENCH GUIANA: Sagot 919 (N-fragment and photo of isotype).

#### **Abuta Candollei** Triana et Planch.

The Krukoff collections cited below are without doubt conspecific with the Buchtien collections cited in *Brittonia* 3: 70 (1938) from the same region, but our remarks concerning these Buchtien specimens still hold inasmuch as staminate flowers are still unknown from the Bolivian plants. It is therefore necessary to continue to regard the identification of the Bolivian material as tentative.

Additional citations: SURINAM: Boschwezen 6747 (N-fragment); Pulle 337 (N-fragment). FRENCH GUIANA: J. Martin s. n. (N-fragment and photo of cotype of *A. oblonga* Miers). BOLIVIA: La Paz: ? Krukoff 10652 (N), ? 10802 (N), ? 10927 (N), ? 11083 (N).

#### **Abuta grandifolia** (Mart.) Sandw.

The G. Gardner 3567 cited in *Brittonia* 3: 61 (1938) as from the Britton herbarium is actually from the Meisner herbarium, and the H. H. Rusby 1980 and Burchell 852<sup>a</sup> cited on the same page as from the Britton herbarium are actually in the Columbia University herbarium.

Additional citations: VENEZUELA: Bolívar: Ll. Williams 11437 (N). SURINAM: Samuels s. n. [15 July, 1906] (N). BRAZIL: Amazonas: Krukoff 4720 (N); Martius s. n. (N-photo of type); Pará: Ducke 275 (N); Mattogrosso: Riedel 866 (M). BOLIVIA: La Paz: Krukoff 10633 (N). 10954 (N).

**Abuta Grisebachii** Triana et Planch.

Additional citations: BRAZIL: Amazonas: Ducke 415 (N); ? Krukoff 8030 (N).

**Abuta imene** (Mart.) Eichl.

Additional citations: BRAZIL: Amazonas: Martius 3051 (N-photo of type of *Cocculus amazonum* Mart.), s. n. (N-photo of type); Spruce s. n. [in vicinibus Barra] (N-photo of isotype of *A. rigida* Miers).

**Abuta Klugii** Moldenke ex Macbr.

Macbr., *Field Mus. Publ. Bot.* 13,2: 699, without Latin diag. (Oct. 1938); *Brittonia* 3: 64. Nov. 1938.

The British Guiana collection cited below is probably best placed here. The plant is described by its collector as a medium-sized bush-rope, the flowers and inflorescences yellowish-green. Mr. Krukoff thinks that it is *A. imene*, but dissection shows that the six stamens are all plainly connate only at the very base (almost separate), which excludes that species and indicates *A. Klugii* instead.

Additional citations: BRITISH GUIANA: British Guiana Forestry Dept. 2610 [field no. D. 569] (K, K). PERÚ: Loreto: Klug 1415 (N-fragment and photo of type).

**Abuta macrocarpa** Moldenke

Additional citations: BRITISH GUIANA: British Guiana Forestry Dept. 2446 (N-photo of type).

**Abuta racemosa** (Thunb.) Triana et Planch.

Additional citations: COLOMBIA: Tolima: Triana s. n. [Cundai] (N-photo), s. n. [Mariquita] (N-fragment).

**Abuta spicata** (Thunb.) Triana et Planch.

Additional citations: COLOMBIA: Chocó: Seemann s. n. (N-fragment and photo of type of *A. Seemanni* Triana et Planch.).

**Abuta trinervis** (Rusby) Moldenke

Additional citations: BOLIVIA: La Paz: Buchtien 1935 (N-isotype).

**Anomospermum bolivianum** Krukoff et Moldenke, sp. nov.

*Frutex scandens; ramis dense breviterque pubescentibus vel puberulis; petiolis leviter puberulis vel glabris; foliis subcoriaceis utrinque pernitidis ellipticis vel late ellipticis acuminatis integris, ad basim acutis vel obtusis vel subtruncatis, utrinque glaberrimis.*

Large woody vine, to 110 feet long; branches slender, terete, solid, densely short-pubescent or puberulent with ochraceous or brownish hairs, the younger ones very densely white-lenticellate with slightly elevated elongated corky lenticels; leaves alternate; petioles slender, 2,4-7 cm long, finely and obscurely puberulent or glabrous, incrassate and often genuflexuous at the apex; blades subcoriaceous, very shiny on both surfaces, elliptic or broadly elliptic, occasionally varying to subovate, 9-20 cm long, 4,5-14 cm wide, acuminate at the apex, entire, varying from acute to obtuse or subtruncate at the base, glabrous on both surfaces, distinctly pinnately 3-5-nerved; midrib, primaries, and secondaries prominulous above, prominent beneath; primaries (excluding the midrib) 4, 2 issuing from the very base of the blade and 2 issuing slightly above the base, arcuate-ascending; vein and veinlet reticulation very abundant, distinctly and beautifully prominulous on both surfaces; inflorescence supra-axillary and terminal, forming elongate

leafy panicles at the ends of the branches; peduncles, rachis, and pedicels densely puberulent with spreading brownish hairs; staminate flowers: sepals 6, the 3 outermost elliptic, navicular, thickened and fleshy, 1,5-2,5 mm long, 0,7-2,5 mm wide, blunt at apex, glabrous inside, densely villous-tomentose outside, the 3 inner ones similar in all respects, but oblong-elliptic or elliptic and 1-2 mm long; petals 6, broadly obovate or flabelliform, about 1,2 mm long and 1 mm wide, glabrous, the margins strongly involute and enveloping the individual stamens; stamens 6, slightly surpassing the petals, free and separate to the base; anthers longitudinally dehiscent; pistillate flowers and fruit not seen.

The type of this distinctive species was collected by Boris Alexander Krukoff (n° 10773) at Tuirí, near Mapiri, on the left bank of the Río Mapiri, at an altitude of between 490 and 750 m, Prov. Larecaja, La Paz, Bolivia, between September 12 and 30, 1939, and is deposited in the Britton herbarium at the New York Botanical Garden. The species is related to *A. chloranthum* Diels, which, however, differs very pronouncedly in its more conspicuously axillary, elongate, and racemiform inflorescences, glabrous branches, petioles, peduncles, rachis, and pedicels, much larger glabrous flowers, and small leaves with much finer reticulation.

Additional citation: BRAZIL: Río de Janeiro: Miers 4254 (N-fragment and photo of isotype).

**Anomospermum reticulatum** (Mart.) Eichl.

Additional citations: BRAZIL: Amazonas: Martius 3027 (N-fragment and photo of cotype).

**Anomospermum Schomburgkii** Miers

The Hostmann 1298 cited in *Brittonia* 3: 35 (1933) as from the Britton herbarium is actually in the Torrey herbarium and the Blanchet 642 cited on the same page as from the Britton herbarium (by implication) is actually in the Meisner herbarium.

Additional citations: BRITISH GUIANA: Rob. Schomburgk 891 (C). BRAZIL: Amazonas: Spruce 2563 (N-isotype of *A. lucidum* Miers). BOLIVIA: La Paz: Krukoff 10923 (N).

**Chondodendron candicans** (L. C. Rich.) Sandw.

Additional citations: BRITISH GUIANA: British Guiana Forestry Dept. 2689 (N); Sandwith 561 (N). SURINAM: Pulle 408 (N-photo of type of *Abuta? Pullei* Diels).

**Chondodendron iquitianum** Diels

Additional citations: ECUADOR: Napo-Pastaza: Gill 6 (N), 12 (N), 35 (N). PERÚ: Loreto: Tessmann 4196 (N-fragment and photo of type).

**Chondodendron limaciifolium** (Diels) Moldenke

Additional citations: BRAZIL: Amazonas: Krukoff ? 7823 (N), 7824 (N), 7828 (N); Pará: Siqueira 8266 (N-fragment of type).

**Chondodendron microphyllum** (Eichl.) Moldenke

Additional citations: BRAZIL: Bahia: Blanchet 3178<sup>a</sup> (N-fragment and photo of type), s. n. [1851] (N-fragment et photo of type of *Detandra latifolia* Miers).

**Chondodendron platiphyllum** (A. St. Hil.) Miers

The Martius 510 cited in *Brittonia* 3: 13 (1938) as from the Britton herbarium is actually in the Meisner herbarium.

Additional citations: BRAZIL: Río de Janeiro: Gaudichaud 1071 (N-fragment).

**Chondodendron tomentocarpum** (Rusby) Moldenke

Additional citations: BOLIVIA: La Paz: Krukoff 10799 (N); R. S. Williams 562 (N, N), 616 (N-isotype).

**Chondodendron tomentosum** Ruiz et Pav.

Additional citations: COLOMBIA: Boyacá: Lawrance 687 (N-fragment). ECUADOR: Napo-Pastaza: Gill 20 (N). PERÚ: San Martín: Spruce 4474 (N-photo of isotype of *C. cretosum* Miers and *Botryopsis Spruceana* Eichl.); Ll. Williams 6276 (N-fragment).

**Chondodendron toxicoferum** (Wedd.) Krukoff et Moldenke

See the supplementary note on this species in *Brittonia* 3: 338 (1939). It was discussed in our original paper under the name *C. polyanthum* (Diels) Diels. The Castelnau specimen at the Field Museum, Chicago, cited in *Brittonia* 3: 23 (1938), is actually an isotype.

Additional citations: BRAZIL: Amazonas: Ule 5631 (N-fragment of type of *C. polyanthum*). PERÚ: Loreto: Castelnau s. n. (N-photo of type, P-type).

**Elissarrhena grandifolia** (Eichl.) Diels

Additional citations: BRAZIL: Amazonas: Krukoff 8605 (N, N).

**Sciadotenia amazonica** Eichl.

Additional citations: BRAZIL: Amazonas: Martius s. n. (N-photo of type).

**Sciadotenia cayennensis** Benth.

Additional citations: BRITISH GUIANA: A. C. Smith 3581 (N). FRENCH GUIANA: Poiteau s. n. (N-fragment): Sagot 23 (N-photo of cotype).

Additional citations: BRAZIL: Pará: Burchell 9993 (N-fragment).

**Sciadotenia pubistaminea** (K. Schum.) Diels

Additional citations: BRAZIL: Minas Geraes: 14473 (N-fragment and photo of type).

**Sciadotenia Sagotiana** (Eichl.) Diels

Additional citations: FRENCH GUIANA: Sagot 19 (N-fragment of isotype).

**Sciadotenia similis** Moldenke ex Macbr.

Macbr., *Field Mus. Publ. Bot.* 13: 2: 688, without Latin diag. (Oct. 1938); *Brittonia* 3: 33. Nov. 1938.

As the editors of the Gray Herbarium's Card Index to new species and varieties of American plants have pointed out, the

names *Sciadotenia similis* and *Abuta Klugii* were first effectively published by Macbride in his splendid work on the flora of Peru, where he accredited them properly but failed to include a Latin diagnosis. In spite of this first effective publication of these names, the first valid publication under the present edition of the very changeable International Rules of Botanical Nomenclature is in our *Brittonia* paper.

**Sciadotenia Sprucei** Diels

Additional citations: BRAZIL: Amazonas: Spruce 2209 (N-photo of isotype); Traill 14 (N-fragment).

**Sciadotenia toxifera** Krukoff et A. C. Sm.

Krukoff et A. C. Sm., *Bull. Torrey Club* 66: 308. 1939.

For description of this recently discovered species, see the reference cited above.

Citations: ECUADOR: Napo-Pastaza: Gill 11 (N-type), 36 (N).

**Telitoxicum Duckei** (Diels) Moldenke

Additional citations: BRAZIL: Pará: Ducke 9012 (N-fragment of type).

**Telitoxicum Glaziovii** Moldenke

Additional citations: Cultivated: BRAZIL: Río de Janeiro: Glaziou 10072 (N-fragment et photo of type).

**Telitoxicum inopinatum** Moldenke

Additional citations: BRITISH GUIANA: Hohenkirk 55 (N-fragment and photo of type), 714 (N-fragment).

**Telitoxicum minutiflorum** (Diels) Moldenke

Additional citations: BRAZIL: Amazonas: Krukoff 8840 (N).

**Telitoxicum peruvianum** Moldenke

Additional citations: PERÚ: Loreto: Klug 2129 (N-fragment and photo of type).

**Ungulipetalum filipendulum** (Mart.) Moldenke

Moldenke, *Phytologia* 1: 280. 1938.

For the original description of this genus and for additional notes on various species of *Cissampelos*, *Disciphania* and *Hiperbaena*, see *Phytologia* 1: 274-283 (1938).

Additional citations: BRAZIL: Río de Janeiro: Wied-Neuwied s. n. (Mu-type, N-photo of type). Cultivated: BRAZIL: Río de Janeiro: Glaziou 13520, in part [ $\sigma^7$ ; São Christovão] (N-fragment).

THE GEOGRAPHIC DISTRIBUTION OF CERTAIN SPECIES OF MENISPERMACEAE AS RECORDED IN MY PUBLICATIONS TO DATE:

PANAMÁ: *Chondodendron tomentosum* [Canal Zone].

COLOMBIA: *Abuta colombiana* [Chocó]. *Abuta grandifolia* [Putumayo and Caquetá]. *Abuta racemosa* [Tolima]. *Abuta spicata* [Chocó]. *Chondodendron tomentosum* [Boyacá]. *Sciadotenia similis* [Leticia].

VENEZUELA: *Abuta grandifolia* [Bolívar]. *Abuta imene* [Amazonas]. *Abuta velutina* [Amazonas].

BRITISH GUIANA: *Abuta barbata*. *Abuta bullata*. *Abuta grandifolia*. *Abuta Klugii*. *Abuta macrocarpa*. *Abuta obovata*. *Anomospermum Schomburgkii*. *Chondodendron candicans*. *Sciadotenia cayennensis*. *Telitoxicum inopinatum*.
